

WhatsUp[®] Gold MSP Edition

Enables Flexible Managed Service Offerings

MSP Edition Features

- > Discovery
- > Layer 2 Mapping
- > Availability and Status Monitoring
- > Performance Monitoring
- > Alerting
- > Reporting
- > WMI, SSH, HTTPS Monitoring
- > Inventory Monitoring
- > Wireless Monitoring (including Meraki)
- > AWS & Azure Cloud Monitoring

OPTIONAL ADD-ONS

- > Virtualisation Monitoring
- > Application Performance Monitoring (including Outlook 365)
- > Network Traffic Analysis
- > Configuration Management

- > Cost-effective, vendor-agnostic, easy to use, market-tested solution.
- > Enables MSPs and SIs to deliver network, system & application management excellence to end customers as a predictive, SLA-compliant & profitable service.
- > Designed for use in centralized, distributed & mixed client environments.
- > Licensed as a subscription, includes minor and major release upgrades and technical support.

Proactively Monitor Entire Networked Infrastructures

WhatsUp Gold allows you to monitor any mix of networks, servers, storage devices, virtual machines, applications, traffic flows and configurations across Windows, Linux and Java environments all through the same, easy-to-use interface.

Monitor both on-premises and cloud deployments from the same console. Track, alert on and report on cloud resource utilization and billing consumption rates.

Our unique interactive map quickly shows your customer's end-to-end network providing the context of how everything is connected. The combination of WhatsUp Gold's interactive map with easy-to-use dashboards and alerts gives you the fastest time-to-answers.

Troubleshoot Faster with Intuitive Maps, and Dashboards

WhatsUp Gold streamlines workflows by letting you initiate management tasks directly from the network map. Easily switch between physical, virtual, wireless and dependency views to accelerate root cause analysis. The result is simple, intuitive troubleshooting that lets you find and fix problems faster than ever.

Enjoy Flexible, Predictable Pricing

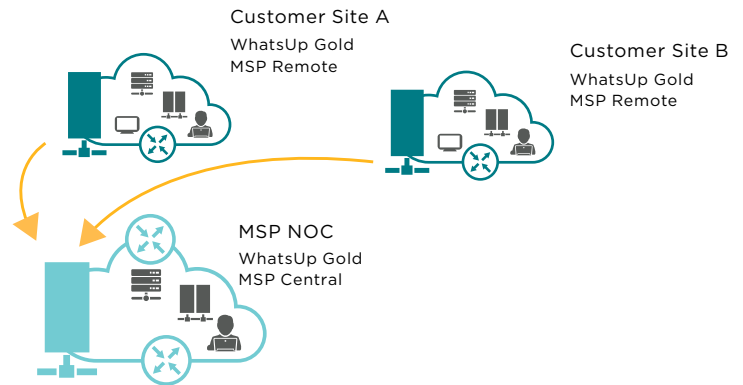

With WhatsUp Gold's device-based licensing you get maximal network monitoring coverage with less effort. Just decide what devices you want to manage and we make it simple from there. You pay by the number of devices you monitor and can apply as many monitors as you need giving you maximum flexibility to accommodate the needs of your customers with a predictable pricing model. Scalable, easy to use, and market-tested, the MSP Edition provides powerful and accurate management price point that delivers the operating margins you need to compete.

Provide Flexible Solutions to Match Your Customers' Needs

WhatsUp Gold MSP Edition has been designed for use in centralized, distributed and mixed client environments. Distributed deployment supports overlapping (non-unique) IP Address spaces.

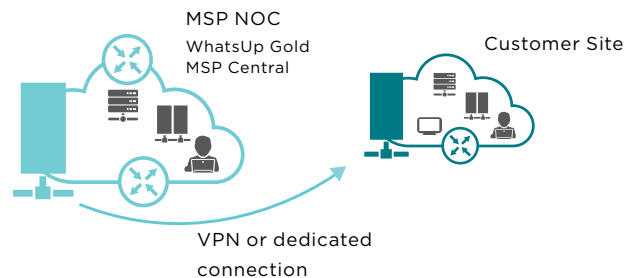

Remote Monitoring

In cases where connectivity between MSP and customer's site is non-dedicated or unreliable, MSP Remote client installations can be deployed in concert with MSP Central at MSP NOC.

Central Monitoring

MSPs that have dedicated VPN connectivity to customer's site can deploy WhatsUp Gold MSP Central in their NOC and monitor customer site from this central location.

Hybrid Monitoring

WhatsUp Gold MSP Edition can be flexibly deployed for environments where some locations enjoy dedicated connectivity and others do not through a combination of MSP Remote clients and direct monitoring from MSP Central.
